

MOHAMMAD USMAN

Product Manager

AI Products · Agentic AI · Conversational AI · Platform & Monetization · 300M+ Users

Navi Mumbai, India | 9560545554 | mohammadusman18@gmail.com | linkedin.com/in/mohammad-usman-05

PROFESSIONAL SUMMARY

Building autonomous AI agents and platforms at national scale.

Product Manager with 11 years of experience and deep specialization in AI, agentic, and platform products across B2B, B2C, and B2B2C ecosystems. Currently building an autonomous AI voice-agent platform handling 1.4M calls/day across 5 business lines, having taken LLM-powered assistants, customer digital twins, and a 300M-user loyalty platform from strategy to launch. Pairs strong AI-product fluency (LLMs, multi-agent systems, conversational AI, human-in-the-loop design) with ownership of monetization, roadmap, and measurable business outcomes, backed by an Executive PG Diploma in AI & Data Science (IIT Bombay) and a PGDM (MDI Gurgaon). Proven at leading cross-functional teams to ship reliable products at scale.

CORE COMPETENCIES

Product Management: Product Strategy & Vision, Roadmap & Prioritization, PRD, BRDs & User Stories, KPI Definition & Ownership, Agile/Scrum, Go-to-Market, Monetization & Packaging, Stakeholder Management, Cross-Functional Leadership

AI & Data Products: Generative AI (LLMs, RAG), Agentic & Multi-Agent Systems, LLM Orchestration, Prompt Engineering, Model Selection & Evaluation, Guardrails, Human-in-the-Loop Design, Predictive & Decisioning Systems, Personalization, Conversational & Voice AI, Multimodal & Multilingual Experiences

Platform & Growth: Multi-Tenant Platform Design, API-First & Partner Integrations, Product-Led Growth, Tiered Monetization, Engagement & Retention, A/B Testing & Experimentation, Wireframing & Prototyping, Product Analytics

Tools: Jira, Azure DevOps, HP-ALM, Figma, Postman, Swagger, Strapi, CleverTap, Claude, Cursor

PROFESSIONAL EXPERIENCE

Product Manager — Reliance Jio Infocomm Limited

Oct 2022 – Present

Mumbai, India · Managed multiple products concurrently across the AI and platform portfolio.

AI Voice Agent Platform — Autonomous Outbound Customer Engagement

Mar 2026 – Present

- Built and launched an AI/ML voice-agent platform that conducts autonomous, human-like outbound conversations on behalf of live agents, serving 5 business lines from a single platform at ~1.4M calls/day.
- Defined how the agent engages customers, reads intent in real time, and drives the next action, routing high-value outcomes to human agents for closure (human-in-the-loop).
- Structured the platform as a multi-tenant service so five business units share one AI platform while keeping independent delivery roadmaps and evenly allocated call capacity.
- Shaped the intelligent localization capability that adapts each conversation to the customer's regional context, enabling natural, language-appropriate engagement at national scale.
- Designed adaptive conversation strategies that adjust the agent's approach across attempts, improving pick-up and response among initially unresponsive customers.
- Delivered multi-agent, multilingual concurrency across business lines, languages, and contexts, reaching a 95% pick-up rate and ~90% positive-response rate among engaged customers while significantly reducing cost per call.

Personal AI Assistant — Multimodal Conversational Agent

Aug 2025 – Apr 2026

- Took a personal AI assistant from concept to external pilot in 9 months: a multimodal agent (text, voice, speech-to-speech) that answers questions and completes tasks on the user's behalf.
- Scoped the agentic action layer spanning domain assistants (cab booking, email, and sector apps), letting users complete tasks in one step instead of switching apps, driving ~7 tasks completed per active user.
- Prioritized a unified multimodal experience (type, speak, or hold a voice conversation), adopted by ~40% of users.
- Drove delivery across a cross-functional team, integrating internal and partner services behind one interface.
- Steered the roadmap and success metrics through the external pilot, reaching ~45% retention across a 10K cohort.

AI Customer Digital Twin — Autonomous AI Agent for Telecom Subscribers

Jan 2025 – Jul 2025

- Led an LLM-powered AI Customer Digital Twin that autonomously resolves customer issues or recommends personalized actions for each telecom subscriber, rolled out to ~1M subscribers.
- Shipped the product from concept to production in 7 months with a 10–15 person engineering and data-science team.
- Established the human-in-the-loop framework that automated ~30% of eligible interactions, deflecting ~15% of support contacts while routing higher-risk actions for approval.
- Partnered with engineering and data science to define the agent's success metrics (automation rate, resolution rate, retention) and track performance post-launch.
- Cut churn ~15% with a proactive retention capability that surfaces tailored plan offers to at-risk subscribers, validated through a controlled A/B test before full rollout.

Rewards & Loyalty Platform — Cross-Partner Earn & Redemption

Apr 2023 – Apr 2025

- Diagnosed why the prior loyalty program was underperforming (weak acquisition, stagnant growth, a clear gap versus competitors) and set direction toward a single, consolidated loyalty platform.
- Grew the platform across web and app (45+ features), where users earn points on transactions and redeem them across a shared partner network, reaching ~300M active users and 25 partner programs.
- Authored the product requirements, roadmap, and KPIs for the cross-partner earn-and-redeem model, letting users earn at one partner and redeem at another, growing the partner network 4x to 25 partners.
- Introduced personalized, cohort-based offers as a core capability, driving a 40% uplift in customer lifetime value.
- Launched the tiered membership model, improving revenue ~10% as offer and reward adoption scaled.

JioMeet — Video Conferencing Platform (Monetization & Packaging)

Oct 2022 – Mar 2023

- Owned monetization and packaging for JioMeet (30M+ users), setting the free-vs-premium strategy across features and tiers, and the pricing behind them.
- Managed the monetization and packaging roadmap and its KPIs (premium adoption, ARPU), driving delivery with a 15-member cross-functional team and cutting release turnaround 35%.
- Rolled out Watch Party for JioCinema (synchronized streaming with group chat), reaching 5M+ users and lifting engagement per session 25%.

IT Analyst — Tata Consultancy Services

Sep 2018 – Oct 2021

Client: Eli Lilly (Life Sciences Domain) • Noida, India

- Translated business needs into 6+ SaaS modules (user onboarding, RBAC, multi-level approvals, audit trails, compliance dashboards) in a regulated life-sciences environment.
- Produced 5+ BRDs and 10+ user flows/wireframes, aligning business and engineering to accelerate delivery 20%.
- Conducted discovery through gap analysis and 20+ stakeholder interviews, identifying 15+ enhancements that cut approval-workflow time from 3 days to 1.
- Coordinated end-to-end delivery across 2 major releases with a 6-member cross-functional team, achieving 100% on-time, defect-free launches and lifting client satisfaction 12%.

QA Analyst — Tata Consultancy Services

Sep 2014 – Sep 2018

Client: Lloyds Banking Group (BFSI Domain) • Gurgaon, India

- Safeguarded quality across 50 banking modules through functional, integration, and regression testing, reducing post-production defects 40% and improving release stability.
- Wrote and executed 590+ test scenarios validating process flows and data integrity for core banking systems.
- Collaborated with development and business teams in an Agile/Scrum environment to resolve 900+ defects, ensuring timely fixes in complex financial applications.

EDUCATION

Executive PG Diploma in AI & Data Science	IIT Bombay	Jan 2025 – Dec 2026 (Expected)
PGDM, Business Management	MDI Gurgaon	Aug 2021 – Jan 2023
B.Tech, Electronics & Communication	SRM University	May 2010 – Apr 2014
